

Sidewalk Improvement Program

City of Norcross, GA

While with Q-B Engineering, Collaborative Senior Engineer Gilbert Quinones prepared and implemented a comprehensive citywide program for reconfiguring all sidewalks within the City of Norcross to meet ADA standards. The scope of services included: a sidewalk inventory; surveying; upgrading of plans and specifications; preparation of bid documents; cost estimating and construction observation. The project was completed and operational on time and within budget.

Approximately 40-50 miles of City sidewalks were reconfigured to meet ADA standards. Sidewalks, like roadways, should be designed to serve all users including: children, older people, parents with strollers, pedestrians who have vision impairments, and people using wheelchairs and other assistive devices. Just as a roadway is not be designed for one type of vehicle, the design of sidewalks accommodates more than a single type of pedestrian.
